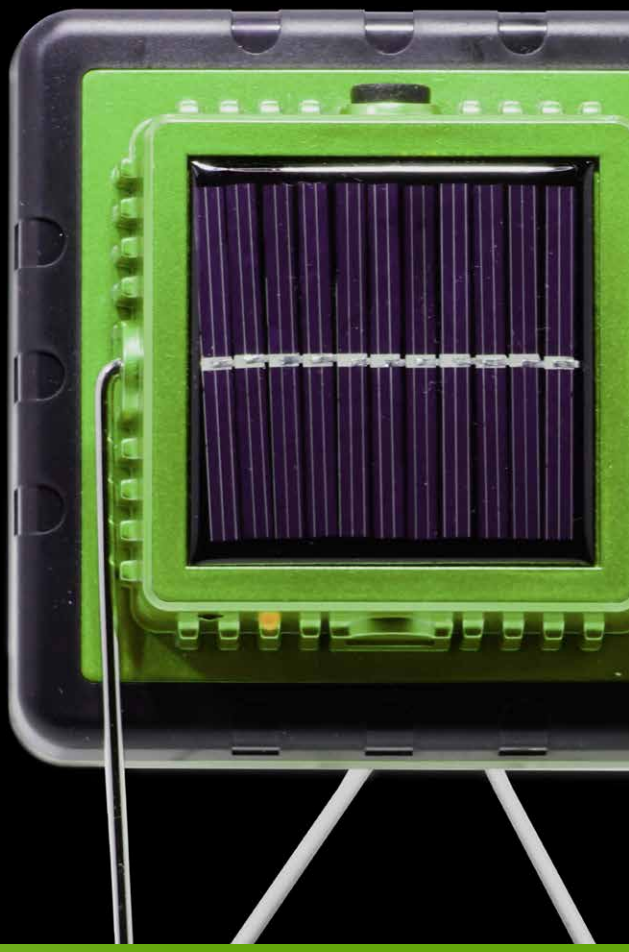
WHAT DO YOU SEE?



Palladium sees:

Package creation & consolidation
Global supply chains
Production quality control
Safeguarding
International sea movement
Warehousing & inventory control
Air charter & dangerous goods adherence
Emergency response supply chains
International sourcing & manufacture
Conformation to global standards

MAKE IT POSSIBLE

MAKING IT POSSIBLE

Energy is never guaranteed after a disaster and that means a lack of lighting. Alternatives such as wood fires and kerosene lamps are unhealthy and pose risks to affected populations. Palladium International rapidly provides people in a humanitarian crisis with aid supplies, including clean, safe solar lights to help save lives and reduce vulnerabilities.

QUALITY ASSURANCE

Palladium Supply Chain Team undertakes extensive research into product testing and market assessment to create a performance specification, guaranteeing quality and reliability. Secondly, we undertake supplier sourcing from a reliable and trusted supplier base at good-value prices. Our thorough due diligence, cooperate social responsibility and environmental checks also guarantee our supplier base is sustainable and socially responsible.

PREPAREDNESS

Only then are goods procured. Palladium quality inspect all goods during manufacture, ensuring the the solar lights meet the highest standard. Next, we move the goods to our pre-positioned stockpile, where we store them until they are needed. Stockpiles are continually managed to maintain the capacity to respond to sudden-onset disasters, and supplier networks monitored for their capacity to augment this. The goods are carefully packaged and labelled, as solar lights can be classified as ‘Dangerous Goods’ for air freight and require special handling.

DELIVERY

As soon as a crisis occurs, Palladium swiftly designs bespoke supply-chain plans, transporting the solar lights (or other products) into the region by any means necessary e.g. chartering aircraft, loading trucks, or managing the work of our partners. We coordinate customs clearance, importing the solar lights into the affected country and working with local agents to ensure the goods are stored, transported and distributed efficiently and effectively.

ACCOUNTABILITY

Throughout this process, Palladium constantly monitors the status of the lights. We ensure unique reference codes are printed on them during manufacture to trace every unit if any problems arise. We deploy personnel to assist with transport and customs clearance once goods have arrived. We even utilise an innovative blockchain technology that allows us to track stock in-field after leaving our direct oversight.
