WHAT DO YOU SEE?

Palladium sees:

In-country movement & last mile delivery

Beneficiary feedback

Distribution monitoring

Civil-Military cooperation

Customs clearance

Quality assurance & inspection

Adherence to humanitarian standards

Packaging reduction and recycling

Supply chain tracking

Local market analysis, procurement & contracting

MAKE IT POSSIBLE

Palladium
MAKE IT POSSIBLE

MAKING IT POSSIBLE

Plastic sheeting can repair or replace an entire home in the aftermath of a disaster; promoting dignity, safeguarding vulnerable populations and saving lives. Speed is critical getting them to those most in need, however there are many issues to navigate including quality assurance, damaged infrastructure, import complexities and poor communications.

ACCESS

Palladium Supply Chain Team are experts in navigating these complications, with years of experience in ensuring humanitarian relief is of the highest possible quality and gets to where it is needed quickly. In doing so, Palladium works with UN bodies, national governments, militaries and NGOs from across the international sector. This is down to last-mile delivery, with extensive expertise in port of entry assessment, customs clearance and in-field logistics. We are expanding into innovative block-chain technology solutions, monitoring movement and distribution of aid despite the challenges posed by disasters, maximising our speed, impact and value for money.

MARKET ANALYSIS

To remain efficient and effective, Palladium undertakes regular preparedness measures including pre-positioning goods in strategic global locations, as well as mapping international supplier and distribution networks to ensure constant access to stock. We complete local market analyses to increase opportunities to support local economies and promote supply chain resilience maintaining a 24/7/365 capability to deliver.

PERFORMANCE TESTING

Millions of pounds are spent by the humanitarian community each year on plastic sheeting, some of which is wasted due to inferior quality and inadequate specification. Palladium's focus on quality assurance is of great importance. We work closely with a trusted and reliable supplier base to ensure manufacture to the highest quality in compliance with internationally agreed standards, and all goods are inspected thoroughly. We undertake laboratory performance-testing, examining issues such as fire-retardancy, tensile strength and UV-resistance to ensure the plastic sheeting remains the most appropriate and highest-performing on the market.

RECIPIENT FEEDBACK

We recognise our work has an environmental impact and endeavour to minimise this. Sustainability and environmental considerations are integral to specification design and packaging requirements, reducing waste and single-use plastics. Furthermore, we obtain end-user feedback to ensure products remain optimal in meeting need.
